

Harmony Tools in Humdrum I

craigsapp@stanford.edu

29/31 March 2016

Installing Humdrum Tools

Best way is by using git to download from github:

<https://github.com/humdrum-tools/humdrum-tools>

Windoze: first install Cygwin: <http://www.cygwin.com>

Above contains two software packages for processing Humdrum data files:

<https://github.com/humdrum-tools/humdrum>

“Humdrum Toolkit”

<https://github.com/humdrum-tools/humextra>

“Humdrum Extras”

Websites:

“Humdrum Toolkit”

<https://www.humdrum.org>

“Humdrum Extras”

<https://extras.humdrum.org>

Humdrum Documentation

| | | |
|---------|----------------------------|---|
| Online: | Humdrum Toolkit User Guide | http://www.humdrum.org/guide |

Humdrum Programming

<http://humlib.humdrum.org>

The humlib library is of a set of C++ classes for parsing [Humdrum](#) data files. It is easy to incorporate into your project by adding these two files:

1. An include file [humlib.h](#)
2. and a source file [humlib.cpp](#)

The source code uses some C++11-specific features, so add the `-std=c++11` option when compiling with GNU g++ or the clang++ compiler. Also include the `-stdlib=libc++` option when compiling with [clang](#). See the [Makefile](#) for compiling the library and [Makefile.examples](#) for compiling and linking executables.

Harmonic Tools

1. Intervals

mint: melodic intervals HT

hint: harmonic intervals HT

cint: composite intervals (counterpoint modules) HE

2. Chords/Sonorities

tntype: sonority types HE

sonority: triadic sonority types HE

3. Key

key/keycor: musical key by correlation HE/HT

mkeyscape: keyscape HE

finalis: Identify finalis tone of music HE

Humdrum Data

Download a large chunk: <https://github.com/humdrum-tools/humdrum-data>

Mostly from: <http://kern.humdrum.org>

Humdrum Extras programs can download internally:

One file: `keycor h://chorales/chor001.krn`

All files in a set: `mkdir chorales; cd chorales`
`humsplit h://chorales`

Download to HT programs: `humcat h://chorales/chor001.krn | key`

multiple files: `humcat -s h://chorales | census -k`

mint^{HT}

Melodic Intervals

<http://www.humdrum.org/man/mint>

<http://www.humdrum.org/guide/ch11>

See a list of options:

`mint -h`

Local manpage:

`man mint`

```
oznin:~ craig$ mint -h

MINT      : Determine melodic intervals between successive pitches.

      This command outputs the distance between successive pitches expressed as diatonic interval size plus interval quality (e.g. m7).

Inputs processed:

      **kern,      **pitch,      **solfg,      **Tonh

Syntax:

      mint [-acde] [-b regexp] [-s regexp] [inputfile ...]

Options:

      -a      : output absolute pitch interval (no leading + or -)
      -c      : output compound intervals as non-compound intervals
      -d      : output diatonic interval size only, without interval quality
      -e      : with -s option, output skipped input data rather than null tokens
      -b regexp : break; do not calculate for records matching regexp
      -s regexp : skip; ignore records matching regexp; output null tokens

Refer to reference manual for further details.
```

```
mint(1) mint(1)

NAME

      mint -- determine melodic intervals between successive pitches for Humdrum inputs

SYNOPSIS

      mint [-acd] [-b regexp] [-s regexp] [inputfile] [ > output-file.mnt]

DESCRIPTION

      The mint command determines the distance (interval) between successive pitches. Output pitch intervals are expressed as a diatonic interval size plus interval quality; a leading plus or minus sign indicates whether the interval is ascending or descending. By way of illustration, mint will change a sequence of **pitch data tokens -- such as C4, A4, E4 -- to the interval sequence +M6, -P4. Each pitch-related input spine is transformed to a corresponding **mint output spine.

      The mint command determines melodic intervals only for pitch tokens within individual spines. Pitch intervals across spines are not determined by mint.
```

mint

What are the melodic intervals in a chorale?:

```
mint chor001.krn | less
```

```
humcat h://chorales/chor001.krn | mint | less
```

What is the most common intervals in the chorale?:

```
mint chor001.krn | serialize | ridx -H | sort | uniq -c
```

HE HE U U

```
mint chor001.krn | serialize | ridx -H | sortcount
```

HE

```
rid -H
```

rid -GLId | grep -v =

HT U

As a percentage:

```
mint chor001.krn | serialize | ridx -H | sortcount -p
```

Super mint

What is the most common melodic interval in all of the chorales:?

```
cat chor*.krn | mint | serialize | ridx -H | sortcount -p | head -n 20
```

U

U

```
cat chor*.krn | mint | serialize | ridx -H | grep -v '[]r]' | sortcount -p
```

U

Least common intervals:

```
cat chor*.krn | mint | serialize | ridx -H | grep -v '[]r]' | sortcount | tail -n 20
```

U

Most common harmonic intervals

hint -ac chor001.krn | serialize -c | ridx -H | sort | uniq -c | sort -nr

1. **hint -ac chor001.krn**: do harmonic interval analysis (Humdrum Toolkit)
2. **serialize -c**: force intervals one to a line (Humdrum Extras)
3. **ridx -H**: remove Humdrum file structure from data (Humdrum Extras)
4. **sort**: sort lines alphabetically (Unix)
5. **uniq -c**: output lines without repetitions, counting occurrences (Unix)
6. **sort -nr**: sort numerically, in reverse order (largest count first) (Unix)

tntype

Tool for generalized description of sonority types (pitch-class sets sounding together)

documentation: <http://extras.humdrum.org/man/tntype>

similar to Humdrum Toolkit command pcset <http://www.humdrum.org/Humdrum/commands/pcset.html>

seven successive “sonorities” present in the above music:

sonority #: 1 2 3 4 5 6 7

Interval vectors

- Similar data generated by *hint*, but more compact

- Major and minor triads have the same interval content: m3, M3, P5
 - $\langle 001110 \rangle$ can be represented by the Forte number enumeration 3-11.
 - 3 = three pitch classes in set
 - 11 = 11th most compact organization of 3 pitch classes
- 3-1 = c,c \sharp ,d 3-2 = c,c \sharp ,d \sharp 3-3 = c,c \sharp ,e 3-4 = c,c \sharp ,f 3-5 = c,c \sharp ,f \sharp etc.

tntype -d

Generate a ****dpc** (diatonic pitch-class) spine listing unique pitch classes in sonorities

sonority #: 1 2 3 4 5 6 7

tntype -ad file.krn

| **kern | **kern | **kern | **kern | **num | **dpc |

Bach chorale sonority types

- Are there more major or minor sonorities in Bach chorales?

By musical description:

```
humcat -s h://371chorales | tntype -D | ridx -H | sortcount
```

By Forte number:

```
humcat -s h://371chorales | tntype | ridx -H | sortcount
```

- Do Bach chorales in minor keys have more major or minor sonorities?

```
humsplit h://371chorales
```

```
humcat -s `egrep -l “^\[a-g][#-]?:” chor*.krm` | tntype -D | ridx -H | sortcount
```

- What is the most common 7th chord sonority?

context^{HT}

Generate transition table information from data sequences

```
tnstype h://chorales/chor001.krn | context -n 2 -o = | ridx -H | sortcount
```

```

finalis^{HE}

Script which extracts the root of the last sonority (using sonority tool)

```
finalis h://jrp/Ock | sortcount -p
```

| | |
|-------|----|
| 26.8 | D |
| 21.65 | F |
| 20.62 | G |
| 13.4 | E |
| 12.37 | A |
| 4.12 | C |
| 1.03 | B- |

```
finalis h://jrp/Ock | sortcount -p
```

| | |
|-------|----|
| 37.21 | G |
| 14.19 | A |
| 13.72 | E |
| 12.79 | F |
| 12.09 | D |
| 8.37 | C |
| 1.63 | B- |

Starting/Ending sonority

- Do Bach chorales start and end on the same sonority?
- How does the starting/ending chord root relate to the key of the chorale?

`humcat -s h://371chorales | humsplit`

```
#!/usr/bin/perl

@filelist = @ARGV;

foreach $file (@filelist) {
    processFile($file)
}

sub processFile {
    my ($file) = @_ ;
    $first_sonority = `sonority $file | ridx -GLIMd | grep -v "::-" | head -n 1`;
    $last_sonority = `sonority $file | ridx -GLIMd | grep -v "::-" | tail -n 1`;
    $key = `egrep -i '^\\*[A-G][#-]?:' $file | head -n 1 | sed 's/\\t.*//';
    chomp $first_sonority;
    chomp $last_sonority;
    chomp $key;
    print "$file\\t$key\\t$first_sonority\\t$last_sonority\\n";
}
```
